Minnesota – the Land of 10,000 Saltwater Lakes?

Storm Water Series at Cascade Meadow Wetlands & Environmental Science Center

Minnesota is proud to claim the honor of having over 10,000 freshwater lakes, but did you know some of them are becoming salty? Come and learn about the municipal, industrial, and residential sources of excess salt and how it impacts our waters. Barb Huberty, Environmental and Regulatory Affairs Coordinator for the Rochester Public Works Department, will explain how state and local agencies are changing their roadway snow and ice management practices to reduce salt loads. Attend and gather information about choosing the best products for your own deicing applications and how to reduce salt loads excreted by your water softener. By the end of the evening, you will be better equipped to do your part to keep our lakes, rivers, and groundwater fresh. Please RSVP to info@cascademeadow.org or 507-252-8133.

This program is FREE of charge. Please reserve your place by emailing info@cascademeadow.org or calling 507-252-8133.

Date: Tuesday, January 28, 2014

Time: 7:00 – 8:30 pm

Place: Cascade Meadow Wetlands and Environmental Science Center
2900 19th Street NW, Rochester, 55901
